

Vocabulary

Word	Picture	Definition
Adult		A fully grown animal/human.
Life cycle	(See the diagrams below)	The changes living things go through to become an adult.
Offspring		The baby or child of a living thing (animal/human or plant)
Reproduce		When living things make new living things of the same kind to produce offspring.

All animals, including humans, need air, water and food to stay alive and **grow**.

The Human Life Cycle

Some animals give birth to live young and their offspring usually look like them when they are born.

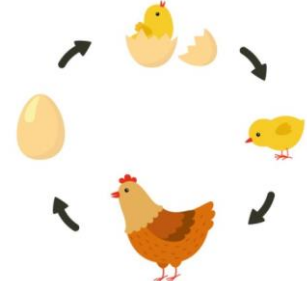

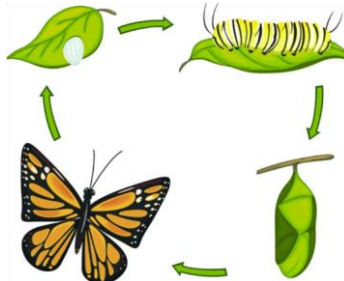

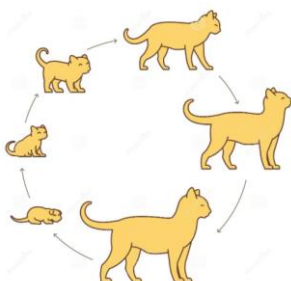

Some animals have offspring which do not look like them, eg fish, butterflies.

Some animals lay eggs which hatch into live young then develop into an adult.

Animal Life Cycles

St Sebastian's Primary School Knowledge Organiser

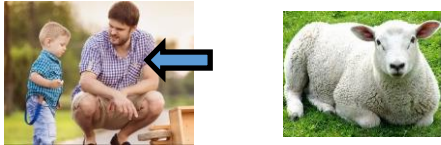

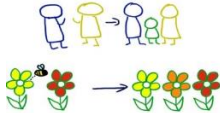

Term: Summer 1

Subject: Science— Animals Including Humans: part 2

Year: 2
